

Election of the Graduate Student Representatives

Our candidates for the term of 2015 / 2016

The election will take place from 01:30 until 04:15 pm on November 18, 2015

Jonathan Adam

EPI II, Neuherberg

I started my project at Helmholtz Zentrum München two years ago in the Institute of Epidemiology II.

During my studies in Jena, I was a member of the "Fachschaftsrat Bioinformatics" and also represented our course of studies at the FSR-Kom (a second board besides the Stura in Jena). In the context of these activities, I gained various insights into the honorary offices within a university.

Since the beginning, I have also been part of DINI and therefore I am already involved in problems and projects at HMGU together with the other DINI members.

As a Graduate Students' Representative, I want to continue this work and also get in contact with more graduate students to find out what can still be improved and investigate what kind of problems we might not be aware of yet.

Tamara Durovic

ISF, Neuherberg

Since high school I have always been involved in organizations such as DINI because I believe it is really important for every one of us to be an informed and active part of society.

It is important that we should be able to decide about the things that matter to us.

Being an international student myself, I can understand a lot of the problems graduate students are coping with, especially at the beginning, and I would be happy to help. As a graduate students' representative I would bring up the things that matter to us graduate students, so that together we can improve our daily lives at the center.

Daniela Dyckhoff

IEG, Neuherberg

One year ago, I started my graduate student project at the Institute of Experimental Genetics and recently joined the DINI team.

Personally, I think that communication and exchange with fellow graduate students on a professional as well as on a social level are the keys to ease and enhance our lives during our studies at Helmholtz Zentrum München.

As a Graduate Students' Representative I would therefore like to facilitate these important discussions and help improve the overall conditions for graduate students at Helmholtz Zentrum München. This way, we can find solutions to the problems you are facing, try to cope with negative aspects of the Center and further improve the everyday lives of all of us.

Moritz Ludwig

TOXI, Neuherberg

In November last year, I started my graduate student project at Helmholtz Zentrum München, and I quickly got to know other graduate students through DINI events, like the get-togethers and the SNOW-weekend. Since this is such a good opportunity to connect with each other, I want to initiate additional events and also improve life on campus.

If you have any suggestions for improvements, please don't hesitate to let me know.

The working conditions at Helmholtz Zentrum München are another important topic for me. My ambition is to make people say "I like working here" and also "I met nice people at the events". Therefore I'd be very happy for your support.
